(54) AUTOMATIC TRANSACTION DEVICE

(57)Abstract:

PROBLEM TO BE SOLVED: To make a store unmanned and solve the demand on a longer service time by performing nonroutine services at a business store including semifixed services.

SOLUTION: The automatic transaction device which can be connected to a center through a line 15 is equipped with a display 9 which displays received data from the center, A speaker 16 which outputs the voice received from the center, a camera 24 which photographs a customer who operates the automatic transaction device, a microphone 5 which inputs a customer's voice, and a transmission/reception control means 21 which performs transmission/ reception control. Then the data received from the center are displayed on the display, an image inputted from the camera 2 is transmitted to the center, and voices are sent to and received from the center through the microphone and speaker, so that an interactive transaction between the customer who operates the automatic transaction device and a center-

side person in charge is enabled.
